

Happy New Year!

Greetings to all in 2007. In the past, I've used this column for my "Year in Review". As I sit here pondering all that occurred in 2006, not only here but abroad, I thought it best to check our paper supply first. I was right, not enough paper! There truly were a lot of changes that faced most of us in 2006. Namely the change from 10 SEER air conditioning units to 13 SEER. I believe this move was a plus for the future of our energy supply, but regrettably at a higher cost to our pocket books. With high energy costs prevailing, the heat pump is making a strong comeback. Heat pumps received a bad rap in the 70's and rightfully so. Too many failures, the 'cold blow' of air and energy costs not rising as predicted saw the demise of the heat pumps. New techniques to manufacturing and technology has resurrected the reliability and efficiency of heat pumps. Heat pumps can efficiently generate heat in climates above 30°. The weather forecast at the time of writing this is going to be in the high 40's and even hitting 50° on January 3, 2007. With the cost of natural gas or fuel oil being what they are, heat pumps are a viable solution to reducing energy costs.

Thank You

All of us at Energy Saving Systems thank you for your patronage in 2006. May God bless you and your families in 2007.

Congratulations

All of the employees at ESS are very special to us. We like to think of them as our extended family. We'd like to thank Duane McWilliams "Mac" for his 10 years of loyalty and expertise he has brought to this company. Mac manages our shop inventory and fabricates all sheet metal products needed in our industry. His 50 plus years of experience in this field leaves our heads spinning in awe of his incredible talent. We recognized Mac and his accomplishments at our annual Christmas gathering in December. May God grant you many more years of health and well being. Thank you Mac.

New in 2007

I hope I'm not sounding like a broken record, but cash back incentives are once again available for the 2007 heating and cooling season. To review the incentives go to our website at esshvac.com. money saving coupons will also be available each month. Don't forget to take advantage of this. Online service scheduling is also available. We think we have tweaked it to be user friendly. Wish to receive the newsletter or any other ESS special notices by e-mail? Call us or e-mail us your request at esshvac@choiceonemail.com.

Holding the Line

As with households, businesses develop budgets for the new year to come. You'll be happy to hear our planned maintenance program will remain at \$140.00 for the coming year of 2007.

Quote of the Day

The best thing to do behind a friend's back is pat it.
-Ruth Brillhart

More Services?

We are adding another service to benefit you. Dryer vent cleaning. Dryer vents accumulate quite a bit of lint during the year. Besides making the dryer work harder, it also causes your dryer to consume more energy. As the vent becomes restricted, less air can flow through. This causes excessive heat being contained in the dryer causing the burner or element to cycle on high temp. shut down, more over it could lead to a more serious condition. This lint could ignite. Dryers are designed for maximum airflow to efficiently dry clothes. Call us to schedule your dryer vent cleaning.

Dryers located on outside walls \$95.00

Dryers on inside walls \$125.00
