

Spring is always an interesting season of the year. What was once sitting dormant, what appeared dead, is getting ready to spring to life. Once dull looking grass, trees, shrubs etc., will soon be full of beautiful, radiant colors. Many times I often take for granted the season changes, but this year I will pay closer attention. As the weather warms and trees start budding, flowers start blooming, I will marvel at God's handy work. Each day he paints a new scene, only to continue adding more and more color with a stroke of his brush. Spring is also the time of year we commemorate the suffering, death and resurrection of our Savior Jesus Christ. I pray everyone takes some time throughout Holy week to reflect on Jesus' suffering, death and resurrection and the awesome love our God has for all! Have a blessed Easter.

### Planned Maintenance

These newsletters are also reminders of the arrival of planned maintenance cards. Cards will follow shortly. Remember to call early to schedule your visit.

### Electronic Age

This will be the last mailed newsletter. We would like to go electronic and e-mail the newsletter in the future. Please e-mail your address to us to continue receiving the newsletter. We do understand that everyone may not have e-mail capabilities. For those still wishing postal service mailing we will accommodate you. Our e-mail address is: [esshvac@choiceonemail.com](mailto:esshvac@choiceonemail.com), or call us for continued mailing of newsletters 262-549-9337.

### Tax Credits & Rebates

I'm not sure if everyone has heard about the revised Tax Credit that the Obama administration enacted in Feb '09'. You can claim up to \$1,500.00 in Tax Credit for qualifying Energy Saving equipment or products for your house hold during the 09-2010 tax years. This is a one time credit per household. Many items may qualify, i.e. windows, doors, insulation, boilers, HVAC Equipment. It is a fact that most of a household budget is spent on heating and cooling. If your equipment is 15 years or more old, it would be a smart investment to upgrade to high efficiency hybrid systems, couple the Tax Credit with the manufacturer rebates available, you could get up to \$3,050.00 in total. That's not chump change! That's an incentive. Choose wisely on how to improve your house and comfort while saving money and energy in the long run. Call us for an evaluation of your heating and cooling equipment and a FREE estimate to replace your equipment 262-549-9337.

### Class Action Suit

As far as I know, the heat exchanger class action suit on Carrier and Bryant furnaces will expire at the end of June '09'. The manufacturer will either cover the cost of heat exchanger replacement ( up to 4

hrs labor) or will buy back your furnace for a set price if you purchase a new Bryant or Carrier furnace.

### Extended Warranties

If your furnace came with an extended parts and labor warranty the factory is tightening their belts when it comes to yearly service performed on the covered equipment. If yearly service cannot be proved they will start denying any warranty claims processed by us. Your furnace and air conditioner is a vital piece of equipment that requires yearly maintenance. Just as your cars need oil changes / tune ups at given intervals. I'm sure you wouldn't drive it for 2-10 yrs without any maintenance like some homeowners treat their heating/cooling equipment.

### What Is Hybrid Heat??

You've heard of this term or phrase used in the automotive industry, a vehicle that runs on gasoline or electric. The same can be said about heating equipment. In temperatures below 30 degrees the gas furnace provides the warmth for your home. Temperatures above 30 degrees will operate a heat pump instead of the gas furnace to provide warmth, a Heat Pump is both a heat producing and cooling producing unit. This unit runs on electricity. Given the efficiency of a Hybrid heating system, you will definitely realize lower utility bills. I'm looking at my last WE Energies bill and noticed the average temperature for March was 39 degrees. Ideal Hybrid Heat weather. Join more of our satisfied customers by going GREEN.

### Honey do list

A few reminders to add to the list would be:

- Replace air filter on furnace
- Uncover A/C, if you cover it
- Have us tune up the equipment
- If bushes or evergreens are too close to the unit, trim them back
- Turn on circuit breaker
- Any visible signs of mice in unit?
- Is A/C level? Be careful if you level the unit
- Caulk any gaps on house where A/C & electrical lines come out

### Thank you

Above all we graciously thank you for entrusting us to serve you. Your warm comments and blushing statements humble us. It's nice to know humanity still does exist.

Bless All  
The Management

No Charge  
10 Year Parts & Labor on a  
Hybrid System.
